FabricPaySM unlocks the Trillion-Dollar Consumer Data Banking Marketplace

[FabricPaySM](#) empowers a new generation of digital consumers in **Web 3.0** to control their advertising data and more importantly to **monetize this data to pay for everyday goods and service**.

Fabric's consumer data marketplace unlocks an open market to the **trillion-dollar consumer data banking industry** dominated by the duopoly of **Facebook (Meta) and Google in Web 2.0**.

Consumers get paid by Brands to watch ads, **create and mint their own NFTs promoting those brands** and sell them in Fabric's immersive **metaverse marketplace** called **Advertising Land**. ”

Paul Taylor | Chief Executive Officer

Problem Fabric is Solving

For Advertisers, an estimated **\$0.50 of every advertising dollar** is lost to fraud (bots) and middle-man publishers - Facebook and Google - *eMarketer Aug 2019*. Meta (Facebook) is the biggest beneficiary of this broken model.

Meta generates \$40 Billion in revenue per year from 250 Million users in North America by collecting consumer data to send targeted advertising. **Consumers get zero** in this value exchange for “free services”.

Fabric uses patented blockchain / smart contract technology to remove data gatekeepers (Meta and Google) and to allow users to **own their digital identity** and **pay users directly** for access to their advertising targeting data in their Fabric data bank account. Each Fabric user is assigned a unique bank account and routing number allowing for instant money transfer and payment options using **FabricPaySM**.

Press Release

SAN FRANCISCO, California -- (BUSINESS WIRE) -- **Fabric**, a leader in consumer data payments innovation, announced a **partnership with Galileo**, a data network powering the fintech tools that millions of consumers rely on to improve their financial lives, **to deliver FabricPaySM solution to businesses across North America**. Consumers benefit from Fabric by getting paid by Brands to be creators and get paid by Brands in Fabric's Metaverse called “Advertising Land”.
